Short description:

The Paper Catch for the Info printers GPT-6862 and GPT-6863 ist made of 1,5 mm thick high-quality steel.

The front frame is out of plastics.

Inside this plastic frame there is a 7.5 mm acrylic glass door that can only be pushed open towards the inside. So the access to the printer above is blocked.

So it is ideal for outdoor applications.

This Paper Catch is made for a paperwidth up to 85 mm and a maximum Bon length of 70 mm.

The Installation is very easy: only a rectangle cut-out in a front panel of 2.5 mm to 6 mm thickness is required.

Mechanical Dimensions:
